Respond to the following discussion prompt:

**“What counts as convincing evidence for you? Instruments, satellites, or local experience?”**

In your response, provide a critical and well-supported discussion of whether climate change is observable in your region. Your analysis should draw on relevant examples, such as long-term changes in temperature, the frequency or intensity of extreme weather events, droughts, wildfires, or shifts in local ecosystems. You are also expected to evaluate the reliability of the evidence you use, with particular attention to scientific literature, meteorological data, official reports, and systematically documented local observations.
