Discussion

***How can I apply circular economy principles in my
future(current) professional role?***

Co-funded by
the European Union

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the European Education and Culture Executive Agency (EACEA). Neither the European Union nor EACEA can be held responsible for them.

Task description

In this final discussion, you will reflect on how circular economy principles can be applied in your current or future professional role. You may be a student, teacher, researcher, engineer, planner, public administrator, environmental specialist, farmer, entrepreneur, waste manager, architect, economist, or community leader.

Choose a professional role that is relevant to you. Explain how circular economy could influence your decisions, responsibilities, skills or future projects. You may focus on waste prevention, eco-design, sustainable land use, resource efficiency, material recovery, organic waste, soil health, water reuse, policy, education, communication or project management.

This discussion should connect your personal learning pathway with practical action. Think about what you can realistically do, what knowledge you still need, and how your role could contribute to a more circular land and waste system.

Guiding questions

1. What is your current or future professional role?
2. Which circular economy principles are most relevant to this role?
3. What specific action could you apply in your work or studies?
4. What skills or knowledge do you need to develop further?
5. How could your role contribute to sustainable land and waste management?

Expected contribution

Write a reflective discussion post of approximately **300–500 words**. Include one practical action you could take and one learning goal for your future development.
